## Optimizer settings

Setting	Val	Description
debug_print	[]	List of what type of Driver variables to print at each iteration.
invalid_desvar_behavior	warn	Behavior of driver if the initial value of a design variable exceeds its bounds. The default value may beset using the ‘OPENMDAO_INVALID_DESVAR’ environment variable.
optimizer	SLSQP	Name of optimizer to use
tol	1e-06	Tolerance for termination. For detailed control, use solver-specific options.
maxiter	200	Maximum number of iterations.
disp	True	Set to False to prevent printing of Scipy convergence messages
singular_jac_behavior	warn	Defines behavior of a zero row/col check after first call tocompute_totals:error - raise an error.warn - raise a warning.ignore - don't perform check.
singular_jac_tol	1e-16	Tolerance for zero row/column check.
